

Siva Kumar Kurnool Veera Sai

Backend / Platform Software Engineer | Rails, Go, AWS, PostgreSQL | AWS SA Professional

Hyderabad, India | +91-9490647560 | sk800489@gmail.com | linkedin.com/in/sivakumark1 | github.com/AmbitiousSam | medium.com/@sk800489

SUMMARY

Backend and platform software engineer with 4+ years shipping production Ruby on Rails features, cloud-native APIs, authentication systems, and async processing workflows for a US-based product company. Full-stack delivery experience across database schema, Rails backend, and React/Next.js frontend. Strong AWS infrastructure depth (ECS, Lambda, RDS, CDK) as a built-in differentiator on every backend project.

SKILLS

Languages & Frameworks: Ruby on Rails, Go, Python, TypeScript/JavaScript, React, Next.js, Bash

Backend & APIs: Rails, Go HTTP, FastAPI, Sidekiq, BullMQ/Redis, Hasura GraphQL, REST/JSON, SQS/Lambda async

Frontend: React, Next.js App Router, TanStack Query, React Hook Form, Zod, Hasura GraphQL

Auth & Security: AWS Cognito, Azure AD/OIDC, Auth.js/NextAuth, RBAC, Rack::Attack, Flipper, SSO/SAML

Cloud & Infra: AWS (Lambda, SQS, ECS, RDS, S3, Cognito, CloudFront, CDK, CloudWatch), Terraform, Docker

Databases: PostgreSQL, MongoDB, Redis, DynamoDB

CI/CD & Tools: GitHub Actions, GitLab CI, AWS CDK, RSpec, Docker

EXPERIENCE

Xebia IT Architects - Software Engineer (Backend & Full Stack)

Jul 2023 - Present | Hyderabad, India | Client: Premium Parking, US

- Architected and delivered end-to-end AWS Cognito + Azure AD SSO for a production Rails application - built CognitoSessionValidator middleware, dual-write password sync, email-domain tenant routing (SsoTenantLookupService), login_hint handling, and zero-downtime rollout via Flipper feature flags.
- Built a mass email communication platform with role-based scheduling (90-day limit, Chicago timezone), S3/CarrierWave file attachments, and a custom template engine with permissions API, market-scoped template CRUD, and role-restricted editing for market presidents.
- Delivered TextPay citation SMS payment link builder integrated with GlideParcs enforcement API - handled citation number normalization (#-prefix stripping), international phone number preservation, and environment-flexible URL routing.
- Implemented secure location revenue receipt delivery (email/SMS) with Rack::Attack rate limiting, audit logging, and XSS remediation replacing HTML string interpolation with safe DOM manipulation methods.
- Built structured error handling for reservation duration validation in the rate-finding engine with dynamic max-hours messaging and i18n localization (errors.messages.detail.reservation_duration_exceeded).
- Consolidated rate limiting by removing custom RateLimitable Rails concern and migrating all endpoint throttles to centralized Rack::Attack middleware for improved observability and consistency.
- Optimized PostgreSQL performance through read replica setup, write/read query routing, table partitioning, and Sidekiq background job tuning for high-throughput parking transaction workloads.
- Built CloudWatch Logs Insights fraud monitoring dashboards and Lambda-based detection workflows, reducing incident investigation effort by 50-70%.

Xebia IT Architects - Software Engineer

Jul 2022 - Jun 2023 | Hyderabad, India | Client: Premium Parking, US

- Migrated production Rails/PostgreSQL platform from Heroku to AWS, improving uptime, API response times, database performance, and enabling proper autoscaling.
- Modernized monolithic Rails platform by building new features as microfrontend/microservice units using React, Hasura GraphQL, ECS, and PostgreSQL.
- Integrated AWS Secrets Manager replacing hardcoded credentials with ENV.fetch configuration across Rails boot, mailer, and controller contexts.
- Contributed to PostgreSQL and Sidekiq performance improvements including read replicas, partitioning, and query routing for production workloads.

Turing - AI/laC Engineer (Contract)

Jul 2025 - Jan 2026 | Remote

- Evaluated and corrected IaC code generated by large language models (Amazon Nova, Sora) — identified model defects, authored ideal reference solutions across Terraform, AWS CDK, CDKTF, Pulumi, and CloudFormation as ground-truth training and evaluation data for AI model improvement.
- Built a Python batch automation system to execute all engineer task submissions sequentially, collect outputs and results, and package the full dataset for client distribution and local reproducibility across different machine environments.
- Developed hands-on expertise across the full IaC ecosystem — Terraform, AWS CDK, CDKTF (Terraform CDK for Python/TypeScript), Pulumi, and CloudFormation — validating correctness, security, and best practices across all major frameworks.

Xebia IT Architects - Software Engineer Intern

Sep 2021 - Jun 2022 | Hyderabad, India

- Built internal AWS CDK CLI tooling for consistent provisioning of S3, RDS, ECS, ECR, and IAM resources, reducing environment setup time and configuration drift across the engineering team.
- Developed Go/Lambda APIs and contributed to Docker containerization and GitHub Actions CI/CD automation under senior engineering guidance.

PROJECTS

Sygnific | Lead Developer | withsygnific.com

Full-stack career platform: Next.js/TypeScript/MongoDB, Auth.js/RBAC, BullMQ/Redis async workers, SSE progress streaming, AI resume analysis and tailoring pipeline, Python FastAPI interview-intelligence service with tiered LLM routing, Go job scraper with deduplication and scoring, TypeScript/React browser extension for ATS job detection, AWS/Terraform deployment (~75K+ LOC).

Rentspaces | Solo Developer

Cloud environment rental platform supporting per-tenant workspace management; explored DinD, Lima, and Firecracker approaches for VM isolation with concurrent application deployment and live code/deploy view.

CERTIFICATIONS

- AWS Certified Solutions Architect - Professional | Mar 2025 - Mar 2028
- Google Associate Cloud Engineer | Jun 2024 - Jun 2027
- Network Security & Database Vulnerabilities | Apr 2020
- Cybersecurity IT Fundamentals Specialist | Jun 2020

EDUCATION

B.Tech, Computer Science & Engineering | CMR Institute of Technology, Hyderabad | 2022 | GPA: 8.27/10
